

PABLO COSTA

Senior Technical Support Engineer · L2/L3 Escalation · Cloud & Integrations

pablobh@gmail.com · +55 31 99168-3587 (WhatsApp) · Belo Horizonte, Brazil

[pablobh.cloud](#) · [LinkedIn](#) · [GitHub](#)

Fluent English · Available for remote roles (EU, US & global)

PROFESSIONAL SUMMARY

Technical support and integration engineer with 18 years across enterprise IT, remote consulting for international clients, and hands-on software engineering. Six years remote-only for a Swiss software company, where I owned troubleshooting, modernization and customer-side integration for two legacy products. Three years as Tier-3 IT engineer for a public-sector technology agency, serving large clients (Detran-MG, State Department of Education) on incident triage, escalation, and platform customization.

What I bring to a support role is depth: I read code, reproduce issues in my own environment, debug latency and integration failures, and write clear post-mortems. AWS-certified (Solutions Architect, Data Engineer, AI Practitioner, Cloud Practitioner) and Azure (AZ-104). Comfortable with REST APIs, webhooks, OAuth/Cognito, SQL, container troubleshooting, and reading logs across distributed systems.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03) · Aug 2024 – Aug 2027
- AWS Certified Data Engineer – Associate (DEA-C01) · Oct 2025 – Oct 2028
- AWS Certified AI Practitioner (AIF-C01) · Dec 2025
- AWS Certified Cloud Practitioner (CLF-C02) · Sep 2023 – Sep 2026
- Microsoft Certified: Azure Administrator Associate (AZ-104) · Dec 2024 – Dec 2025

PROFESSIONAL EXPERIENCE

Tier-3 IT Engineer · PRODEMGE

Oct 2022 – Mar 2026 · Belo Horizonte, Brazil

PRODEMGE is the technology agency of the State of Minas Gerais, serving public-sector clients such as Detran-MG and the State Department of Education. I worked at the escalation tier of the IT service operation, owning issues that L1/L2 could not resolve and supporting platform stability across heterogeneous corporate systems.

- Operated as Tier-3 escalation point on the CA SDM (Broadcom Service Management) platform, investigating production incidents across dev, staging and production environments. Owned root-cause analysis and remediation when L1/L2 escalated tickets without resolution.
- Deployed and customized the CA xFlow and Service Point platform (CA SDM 17.4), including chatbot scripts, service rules, ticket structure, and SLA configurations. The platform became presentable to PRODEMGE clients (Detran-MG, State Department of Education) with smoother ticket lifecycle and clearer escalation paths.
- Migrated CA SDM from on-premise to hybrid cloud, configuring environments end-to-end and documenting the runbook used by the operations team after handover. Reduced time-to-recovery for environment-level incidents.
- Built and maintained CI/CD on Jenkins for the GPD-9 project (dev → staging → production), investigating pipeline failures, integration errors and deployment regressions. Reduced manual release work and improved deploy consistency.
- Built REST APIs (Spring Boot + WSO2) and operational dashboards in Grafana with Impala SQL against the corporate data lake, replacing manual CSV exports. Business teams gained self-service access to live data, reducing recurring support requests for ad-hoc reports.
- Migrated ~130 analytical reports from legacy SAP BusinessObjects to the upgraded platform, validating semantic layer and presentation formulas across environments. Built 30+ additional reports for specific PRODEMGE departments with custom SLA metrics, incident counts and per-analyst load.

Remote Software & Integration Engineer · Digital Information AG

2016 – 2022 · Zurich, Switzerland (Remote)

Digital Information AG sells high-ticket prepress software to the European printing industry — industrial customers running production lines that depend on accurate file processing. I operated as a remote engineer for six years, handling customer-reported defects, building integration tooling, and modernizing two legacy products that were technically blocked.

- Owned customer-facing troubleshooting on InkZone PPI and DI-Plot: reproduced reported issues from PPF/PostScript sample files provided by industrial clients, identified root cause (parsing, compression, channel conversion, header corruption), and shipped fixes that went directly into production runs at customer sites.
- Built InkZone PPI from scratch in C# + WinForms over a proprietary Pascal codebase without complete documentation. The system monitors customer folders in real time, validates PPF files against structural rules, and produces XML outputs consumed by downstream production systems — eliminating a recurring class of integration tickets.
- Implemented binary-level diagnostics tooling for the PPF extended format (PostScript-based): in-memory and on-disk RLE decompression, channel conversion (3 to 4), binary header rewrites, and dynamic canvas composition with OpenCV and ImageMagick. Reduced average ticket resolution time for image-pipeline failures.
- Performed reverse engineering on undocumented in-house applications to recover lost functionality and unblock support cases that had been sitting in backlog for months.
- Operated cross-timezone with Swiss engineering and product teams in fluent English, documenting findings, writing repro steps and feeding fixes back into the product roadmap.

Integration Engineer · ENotas

2019 – 2020 · Belo Horizonte, Brazil

ENotas integrates electronic invoicing systems with municipal tax authorities across Brazil — an operation that depends on crawlers extracting heterogeneous PDFs from hundreds of municipal portals. I owned the data-extraction pipelines and the fiscal hardware integration layer.

- Diagnosed and fixed extraction failures across municipal portals where structural format drift broke downstream invoicing. Applied PostScript expertise to identify recurring patterns and isolate only the relevant content, reducing manual triage by the operations team.
- Developed cross-platform hardware integration with thermal and fiscal printers (C# and Kotlin), troubleshooting USB/serial communication, driver compatibility and encoding issues for automated receipt generation at customer sites.

Earlier Roles · Pharmascience · IBMEC

2008 – 2013

- Pharmascience — Support Analyst (2011–2013). End-user support, application troubleshooting and infrastructure incidents.
- IBMEC — IT Intern (2008–2010). Linux server administration, Active Directory, networking (DHCP/DNS), and automation scripts.

INDEPENDENT PROJECTS · SUPPORT TOOLING & TROUBLESHOOTING LABS

Personal platforms I designed and shipped end-to-end. I use them to stay sharp on the same stack I support: AWS Lambda, API Gateway, DynamoDB, Cognito, S3/CloudFront, multi-tenant auth, Stripe webhooks, container orchestration and IaC with Terraform. Useful as a controlled environment for reproducing customer issues and testing fixes before they reach production.

- **COSMOFIT Workout Builder** — Serverless SaaS on AWS (Lambda, DynamoDB, API Gateway, EventBridge, Cognito, Stripe). Live in production. Used as a personal reference environment for debugging serverless integration patterns.
- **SuperZap** — Multi-tenant WhatsApp CRM (Node.js, MySQL, Redis, Evolution API in Docker, Cloudflare Tunnel, AWS Cognito + S3). Built around real call-center pain points: visibility, auditing, escalation.
- **SuperDoc** — Serverless document processing platform (Python Lambda, API Gateway, DynamoDB, SQS, S3, CloudFront, ECS Fargate). Free alternative to paid conversion services.

TECHNICAL SKILLS

Support & Operations: Incident management, root-cause analysis, ticket triage and escalation, SLA management, runbook authoring, customer-facing technical writing, on-call rotation experience, cross-timezone communication.

Service Management Platforms: CA Service Desk Manager (Broadcom SDM 17.4), CA xFlow, Service Point, Jira (familiar), ServiceNow concepts, ITIL-aligned workflows.

Cloud (AWS): EC2, Lambda, S3, ECS, DynamoDB, RDS, API Gateway, EventBridge, CloudWatch, X-Ray, CloudTrail, Route 53, IAM, Cognito, Amplify, CloudFront, SQS, SNS, Config, Systems Manager.

Debugging & Observability: Log analysis across distributed systems, CloudWatch Logs Insights, Grafana, X-Ray traces, Zabbix, reproduction of customer-reported issues in controlled environments.

Integrations & APIs: REST APIs (Spring Boot, Express, FastAPI), webhooks, OAuth 2.0, JWT, Cognito User Pools, API Gateway authorizers, Stripe integrations, WSO2 API Manager.

Databases & Data: SQL (MySQL, PostgreSQL, Impala, MariaDB), DynamoDB, query analysis and tuning, data lake querying, log/metric aggregation.

Languages: Python, Java, TypeScript/JavaScript, C#, SQL, Bash, Kotlin.

Infrastructure & CI/CD: Terraform (multi-module, remote state), Docker, GitHub Actions, Jenkins, AWS CodePipeline, Git workflows.

Networking & Security: VPC design, Security Groups, IAM/RBAC, VPN, certificate management, basic packet-level troubleshooting.

EDUCATION & LANGUAGES

- B.S. in Information Systems · Centro Universitário UNIBH (2016–2020)
- B.S. in Computer Networks · Faculdade Estácio de Sá (2010–2013)
- Portuguese (native) · English (fluent — 6 years working remotely with Switzerland)
